

Alexis Huotte
Week 2
Creative Coding II

AI Comparison

I really enjoyed the challenge of this assignment. I learned a lot from it. I felt like I was doing random things for so long without actually knowing why objects were moving the way they were. Even though I am not the best at math I found myself trying things out until I got it right or broke it, and learned from that mistake.

In my coding project for this week I wanted to create objects moving up and down that my character had to move around. I wanted it to reset if it touched the other objects but I wasn't able to figure out how to do that yet. I liked how it turned out though. I found that I liked it more without a background and that it kept drawing the shapes across the screen. I do want to learn how to not make them stay there forever though.

I also enjoyed what Chat GPT made. It had a variety of shapes and made me realize I wanted to add a circle to my coding to break up the straight lines of the rectangles. I liked the color choice the AI picked as well. It added a much needed effect.
